

A complement to your existing Symantec Endpoint Protection (SEP) infrastructure, SOLVE - the Simple OnLine Visualization Engine is a data visualization, reporting and analytics platform that connects directly to your SEP environments

VISUALIZE AND ANALYZE.

SOLVE provides information about SEP infrastructure(s) in user-friendly web dashboards with an array of pre-defined content. SOLVE provides access to any dataset in the SEP database, allowing for unrivaled visualization of SEP data with drill down capabilities from key baselines and metrics in real time.

Unique in its ability to report because it connects directly to your SEPM, SOLVE digests and analyzes all the data in your environment, completely eliminating the need to copy data and install new hardware. SOLVE is easy to configure, fast to implement and friendly to all users.

CRUCIAL VISIBILITY

Tailor your window into your SEP environment to determine very quickly what is working and what needs your immediate attention. SOLVE can drill **all the way down to specific asset details** of full event data and configuration data allowing you to perform comprehensive investigations into events and areas of interest in seconds - all within a single interface.

Additionally, the highly customizable interface allows administrators to modify the view and presentation of the data to best suit their needs.

SOLVE for SEP Features:

- Baselines, KPI's and metrics are at your fingertips with SOLVE so you can delve into what the data is telling you in real-time
- Instantly report numerous SEP environments WITHOUT waiting for database replication
- See configuration data and threat data on the same dashboard
- Create dashboards with limitless drill-downs to slice and present data to your liking
- Universal aggregation of all SEP data sources
- Multi-level report field customization
- Context-relative drill-down capability
- Interactive visualization

Reporting Comparison: SEP vs. SOLVE

REPORTING FEATURE	SEP MANAGER	SOLVE
Basic SEP Reporting Agent, AV, Firewall, ADC, IPS & PTP/Sonar		
Basic Report Customization Trending, Basic Sort & Filter, SQL Query		
Data Export SEP Reports: MHTML, SEP Logs: CSV SOLVE: JPG, PDF, HTML, XLS, CSV		
Scheduled Report Delivery SEP: Email only, MHTML only SOLVE: Email or Folder, PDF, XLS, CSV		
Search SEP: One data point at a time, i.e. agent, FW Log, etc. SOLVE: ALL SEP data pertaining to the agent is visible in a tabbed view		
Advanced Reports i.e.: Multiple drilldowns, advanced SQL, custom dashboard layouts, many chart types, role/group-targeted reports		
Advanced Report Customization i.e. Advanced filters, shared filters, customizable data fields, ad-hoc reporting, dashboard customization, KPIs		
Advanced Report Export/Import Options Import: export/import report templates, share & compare with community, choose export columns		
Report on ALL SEP Databases at Once seamless, consolidated reports from all SEP DBs/Environments or a subset thereof		
Single pane of glass Can view reports/charts/data from other IT products & tools including Symantec's CSP/DLP/CCS side-by-side with SEP reports		

 = FULL Functionality  = PARTIAL Functionality

“With SOLVE, I am able to provide visual insight to our business partners. Because we manage SEP for our franchise groups, I am able to create dashboards that give the responsible party at each franchise insight into the health of their SEP environment without showing them the other franchises or corporate environments. With the scheduled report functionality, I am able to provide a weekly report to each franchisee via email to alert them to definition, age and agent version.

I also have dashboards that enable our senior leadership team to see the overall health of our SEP environment as well as see the daily progress of agent upgrades throughout the system. These dashboards help me manage my team as they roll upgrades while allowing me to help set the proper expectations on the status of the upgrades.
