NorthStar Asset Tracking

IT'S YOUR DATA. **SHOULDN'T YOU BE CAPITALIZING ON IT?**

Technology is an investment — a large one at that. You want to protect your investment as well as get the most value from it. We get it.

However, you can't secure what you can't see, and many asset tracking tools on the market today only give you a glimpse of your entire IT asset landscape.

You deserve better.

NorthStar Asset Tracking creates the foundation for an aggregated, ground-up view of all the assets in your IT environment. It taps into not one or two data sources, but intelligently pulls data from your existing sources across multiple platforms-assembling all the facts you need to make informed decisions into a single, easy-to-configure dashboard.
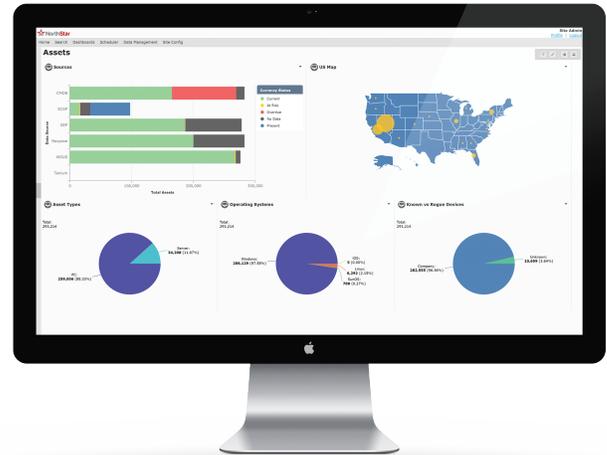

YOUR ASSET UNIVERSE **AT YOUR FINGERTIPS**

Risk numbers, visualizations and data metrics are only as good as the data driving them. If the data underneath is incomplete or suspect, the information gathered can only be trusted to a certain extent, if at all.

NorthStar Asset Tracking is different. It collects asset information from a variety of data sources and ranks the accuracy of each source based on confidence and aging. That information is then pulled into SuperLists, providing an accurate and comprehensive view of every IT asset. These SuperLists prove invaluable when determining your next steps or preparing for risk-based PCI or HIPAA compliance audits.

NorthStar is agentless, which means you don't have to invest in additional agent-based software to find out what you have. With NorthStar, it's all right there in front of you.

ONE PRODUCT. **ONE VIEW**

You shouldn't have to flip between two, three or even seven different dashboards to try to piece together a complete view of your assets. NorthStar Asset Tracking helps all your separate products work as a whole, attaching their isolated information around central "pivot points" that can be interlinked together. However, NorthStar doesn't just capture data; it also transforms it into actionable insights.

GO **AGENTLESS**

By pulling directly from other system data sources such as databases, flat files and LDAPs, NorthStar does not disrupt your other enterprise operations. And with no additional agent-based software to implement, you see value in as little as one week.

KNOW WHAT YOU **DON'T KNOW**

Since NorthStar collects and analyzes data from many sources, it inherently tells you where you are missing security tools. After spending tens or hundreds of thousands of dollars on a security suite, that tool alone can't tell you where it hasn't been installed. **NorthStar can**. And because you're leveraging your existing technology, you don't have to spend more to get more from your data.
