

# NorthStar Privilege Tracking

## PRIVILEGE TRACKING SIMPLIFIED

The concept of aggregating data to understand access privileges is typically a labor-intensive, complicated, time consuming, and expensive process that tends to yield questionable results.

NorthStar Privilege Tracking does all the heavy lifting for you.

NorthStar gives you the ability to aggregate and analyze privileges across your various business and IT platforms by leveraging data that already exists in the tools and applications deployed in your environment. NorthStar provides visibility into all user privileges and entitlements so you can quickly identify risks, spot compliance issues and make the right decisions to improve the effectiveness of your security posture – all while business needs continue uninterrupted.

## PRIVILEGES MEET CONTINUOUS MONITORING

Long gone are the days of the cumbersome tasks of manually gathering and analyzing data from disparate sources. NorthStar's comprehensive data, analytics and reports are refreshed through its automated processes, giving you the ability to track what people have access to and the changes in those privileges over time. This validates remediation is taking place in a timely manner and allows you to quickly identify new privileges that appear in your environment.

## WHERE NORTHSTAR SHINES

NorthStar is unique in the market as one of the only solutions to provide unified reporting across all levels of access in a single repository. Whether it is server privilege, file share, application, or even a badge to facility, all privileges both physical and virtual, can be tracked and monitored in a single pane of glass.

When the NorthStar Privilege Tracking module is used in conjunction with the Asset Tracking and Exposure Tracking modules, you gain valuable information on each of the resources in your environment and can automatically generate new exposure metrics based on those privileges for things such as the number of elevated accounts on a system, or the existence of an account that doesn't have a corresponding approval.

## CHECKS AND BALANCES

While identity and access management solutions manage what SHOULD be in place, NorthStar focuses on what is truly in place, making it the perfect compliment to your IAM solution.

By tracking people and their associated user accounts, where those accounts have access including what applications they are associated with, NorthStar reporting and visualizations provide you with the actionable information you need to efficiently deal with the complexities of user access management, insider threats and compliance requirements.
